Get to Know Me

Being part of a team, I believe in communicating and motivating others to reach goals is the key to an efficient team. Working independently in any career is necessary, but sharing experiences, ideas, solutions, procedures to resolve a task can benefit clients and produce a more efficient team.

My interests outside of work is studio art such as pen and ink, researching UI/UX,

@myles_banner gardening, running long distance, typography, cooking, researching designs and frameworks, bike rides, reading books way past my bed time, trying the best local street food, and keeping

/milob92 up to date on new tech topics from online articles.

In the next two years, I would like to sharpen my digital design and javascript skills (Angular, Vue, Node), and then work on phone app

/mylesbanner developement to offer marketable skills. With these skills, I would like to take a leadership role to teach others who would like to better themselves in the developer world.

/myles-banner-31288269 A long term and personal goal will be to research and publish UX work that focuses on different types of learning disabilities. I have CAPD (Central Auditory Processing Disorder) and ADHD, but have been fortunate to learn that I am a strong visual learner. These disabilities have made me the empathetic front-end developer I am today, and would like to use my skills to benefit myself and others.
